Abstract

Congenital vascular malformations are one of the most challenging subgroup of diseases treated by vascular surgeons and interventionalists. Currently, there exists a lot of misunderstandings and controversies in terminology, diagnosis, and management of patients with these problems. This review article helps doctors with a concise and current understanding of classification, clinical features, complications as well as diagnostic and therapeutic guidelines.

Keywords: Arteriovenous malformation, embolization, Klippel–Trenaunay syndrome, sclerotherapy, vascular malformations
